Principal claim	Supporting result / evidence	Evidence location
The Transformer architecture is based solely on attention, dispensing with recurrence and convolution entirely.	Abstract and Introduction state the Transformer is 'based solely on attention mechanisms, dispensing with recurrence and convolutions	Abstract; Section 1, p.1
Self-attention gives the Transformer	Table 1 shows self-attention has O	Section 4, Table
The Transformer achieved a new	Table 2 reports 28.4 BLEU for the	Section 6.1, Table
The paper shows multi-head	Section 6.2 only reports BLEU on	Section 6.2, Table
The paper demonstrates the	The Conclusion lists extending the	Section 7
The paper introduces an attention	Abstract and Section 3.1 describe a	Abstract; Section
The proposed RNNsearch model	Section 5.1 and Figure 2 show	Section 5.1, Fig.
The paper demonstrates that its	All experiments are on sentence-	Section 4
The paper proposes a sequence-to-	Abstract states computations over	Abstract, p.1
The convolutional model	Abstract directly states this	Abstract, p.1
The paper shows the convolutional	Abstract explicitly states the model	Abstract, p.1

Citation-support status	Reported limitation	Related papers
Fully Supported	None noted by authors for this specific claim.	P02 (source of the attention mechanism this paper builds on, cited as ref [2])
Partially Supported	Authors note that for long	P03 (ConvS2S is the
Fully Supported	Result is specific to WMT 2014	P03 (ConvS2S
Not Supported /	Authors only test one metric	
Not Supported	Explicitly framed as future work

Not Supported	Authors explicitly frame future	
Fully Supported	None stated regarding this	P01 (Attention Is All You
Fully Supported	Speed comparison is against	P01 (lists ConvS2S
Not Supported /	N/A - claim contradicts what the	

Citation Verification Tracking Sheet — Instructions

Row 2 (grey italic) is an EXAMPLE row showing the expected format. Delete it before submitting, or leave it and ad
your real data starting row 3.

Column guide:

Paper ID — Short code, e.g. P01, P02. Use this everywhere instead of retyping titles.

Title / Year / DOI — Full citation details, one consistent format. Use bare DOI (10.xxxx/xxxxx), not mixed links/'not
available'.

Principal claim — The exact statement you plan to attribute to this paper, in your own words.

Supporting result / evidence — The specific data, quote, or finding in the paper that backs the claim.

Evidence location — Page number or section (e.g. 'Results, p.12') where that evidence appears.

Citation-support status — Pick from the dropdown: Fully Supported / Partially Supported / Not Supported / Misattrib
Needs Verification. Be honest — not everything should be 'Fully Supported'.

Reported limitation — Any caveat the authors themselves note that affects how strong the claim is.

Related papers — Note connections to other papers in your set, only after checking (not just because titles sound
similar).

Before submitting, check:

- No blank cells anywhere.
- Support-status column has more than one value used.
- No paper lists itself as 'related' (no self-citations).
- If Paper A lists Paper B as related, check whether B should list A too.
- No duplicate DOIs across different papers.
- Every 'Fully Supported' status is genuinely justified, not a default.
